Queen Elizabeth Way Widening

The Queen Elizabeth Way (QEW) is a major highway in Southwestern Ontario. This high-profile project will widen the QEW to a 6-lane freeway through St. Catharines. It is the largest design assignment awarded to date by the Ministry of Transportation Ontario. This project received substantial federal funding under Border Infrastructure Funding (BIF). Our extensive freeway design and contract administration experience ensured this complex design was practical and buildable. Extensive coordination took place with the municipalities, utilities, external agencies and the public to ensure the process ran smoothly and on schedule.

Highway 33 Roundabout

The Ministry of Transportation Ontario (MTO) hired us to undertake the detail design for the realignment and reconfiguration of the existing intersection at Highway 33 and Country Road 1 into a single lane roundabout with a central island and truck apron. This was MTO's first modern roundabout. The intersection is located 1.6 km west of the western limits of the Town of Picton in Prince Edward County ON. This is an area of high tourist and recreational activity that has reached its operational threshold, particularly during the busy summer months. An innovative staging plan maintained good traffic flow during construction.
